

Practical – 7

Task –1 Write a program that prints the addresses of code, global, static, heap, and stack variables. Analyze the Linux process address space layout and explain each memory segment.

```
GNU nano 8.7.1                                memory_layout.c *
#include <stdio.h>
#include <stdlib.h>
#include <unistd.h>

int global_var = 10;
static int static_var = 20;

void code_function()
{
    printf("This is a code function.\n");
}

int main()
{
    int stack_var = 30;
    static int local_static_var = 40;

    int *heap_var = (int *)malloc(sizeof(int));
    *heap_var = 50;

    printf("Process ID: %d\n\n", getpid());

    printf("Code address      : %p\n", (void *)code_function);
    printf("Global variable   : %p\n", (void *)&global_var);
    printf("Static variable    : %p\n", (void *)&static_var);
    printf("Local static variable : %p\n", (void *)&local_static_var);
    printf("Heap variable      : %p\n", (void *)heap_var);
    printf("Stack variable     : %p\n", (void *)&stack_var);

    printf("\nProcess is running...\n");
    printf("Press Ctrl+C to stop.\n");

    while (1)
    {
        sleep(2);
    }

    free(heap_var);

    return 0;
}
```

```

satwika@SATWIKAG:~$ mkdir practical_memory
satwika@SATWIKAG:~$ cd practical_memory
satwika@SATWIKAG:~/practical_memory$ nano memory_layout.c
satwika@SATWIKAG:~/practical_memory$ gcc memory_layout.c -o memory_layout
satwika@SATWIKAG:~/practical_memory$ ./memory_layout
Process ID: 757

Code address      : 0x55c67c7d31c9
Global variable   : 0x55c67c7d6010
Static variable   : 0x55c67c7d6044
Local static variable : 0x55c67c7d6018
Heap variable     : 0x55c6a55f9b10
Stack variable    : 0x7ffc49ae650c

Process is running...
Press Ctrl+C to stop.
^C
satwika@SATWIKAG:~/practical_memory$ _

```

Task-2 Make use of the /proc//maps file and memory analysis tools to study the memory organization of a running process. Prepare a report explaining virtual memory mappings.

```

#include <stdio.h>
#include <stdlib.h>
#include <unistd.h>

int global_var = 10;
static int static_var = 20;

void display()
{
    printf("Inside code segment\n");
}

int main()
{
    int stack_var = 30;
    static int local_static = 40;

    int *heap_var = malloc(sizeof(int));
    *heap_var = 50;

    printf("Process ID: %d\n", getpid());

    printf("Code address      : %p\n", (void *)display);
    printf("Global variable   : %p\n", (void *)&global_var);
    printf("Static variable    : %p\n", (void *)&static_var);
    printf("Local static variable : %p\n", (void *)&local_static);
    printf("Heap variable      : %p\n", (void *)heap_var);
    printf("Stack variable     : %p\n", (void *)&stack_var);

    printf("\nProcess is running...\n");

    while (1)
    {
        sleep(2);
    }

    free(heap_var);

    return 0;
}

```

```
satwika@SATWIKAG: ~  
satwika@SATWIKAG:~$ nano memory_analysis.c  
satwika@SATWIKAG:~$ nano memory_analysis.c  
satwika@SATWIKAG:~$ ^C  
satwika@SATWIKAG:~$ gcc memory_analysis.c -o memory_analysis  
satwika@SATWIKAG:~$ ./memory_analysis &  
[1] 1017  
Process ID: 1017
